

Who is Daniel Marco Founder of GéoLean ?

Daniel Marco is a TPS expert.
He was trained by Miura San (actual manager of TPS)
He founded GéoLean in 2004 and today, GéoLean counts 15 people and more than 3 Millions euros of turnover.

GéoLean's aim is to install TPS.

Daniel Marco was first trained during four years by Toyota in Japan and in other locations; his godfather of training was Mr Miura who is the actual TPS manager of Toyota.
Daniel has first been trained in TPS system and then for TPS adaptation in non TPS plants.

He applied this training with Toyota people in NHK Japan and in Takaoka plant, in Tutsumi plant in Japan, and Numi plant in USA.

Following this experience, Daniel was in charge of applying TPS in Sommer Allibert Industry, and then in Faurecia as Director of Faurecia Production System. While in this function he applied TPS in more than 150 plants over the world. Finally, Daniel was responsible for the Supplier Development using his speciality of TPS adaptation.

But one of the most important things is that Daniel Marco is a practical specialist of TPS installation, he is a real TRANSLATER of TPS theory into shopfloor installation.
GéoLean' difference is that his TPS installation is on the shopfloor and not in a classroom.

It allows customers to accelerate in complete security the TPS installation.

GéoLean has developed a lot of products and tools directly from TPS, specialized in external and internal logistic (Milk Run, Cross docking ...), Supplier Management and Flow.
